"Great companies are built on great products."

hac**kMENA**

MENA region is one of the promising regions in the future that can bring new ideas, diversity and even products to the global market and FOSS society. As campus expert I Have noticed that GitHub and open source did not reach the most of the region and it can be extended the program to reach more people in the region and help them to build their own communities to have impact on the FOSS society.

What's Missing?

GitHub Education program already reached 4 countries in the region which they can extend to more than 22 country and more than a million of related students.

In Turkey we can reach more than 200 university and half million students, so think about the whole region?

Why Me?

I am highly active engineer who is working with society and NGOs in the region and country, I have a volunteering experience, society building experience and even coding experience for more than 5 years. Beside that I am a Github campus expert, mozilla club leader and Microsoft learn Ambassador. I can build and help to mentro people events and even bring new agreements with local communities and universities.
